2400U10-1

MONDAY, 15 MAY 2023 – MORNING

BIOLOGY – AS UNIT 1

BASIC BIOCHEMISTRY AND

CELL ORGANISATION

**1 hour 30 minutes plus your additional
time allowance**

Surname: _____

First name(s): _____

Centre Number: _____

Candidate Number: 2 _____

For Examiner's use only

Question	Maximum Mark	Mark Awarded
1.	12	
2.	13	
3.	10	
4.	11	
5.	13	
6.	12	
7.	9	
Total	80	

(Turn over)

ADDITIONAL MATERIALS

A calculator and a ruler.

**ITEMS INCLUDED WITH QUESTION
PAPER**

A separate Diagram Booklet.

The Diagram Booklet **MUST be
handed in to the invigilators and
sent for marking.**

(Turn over)

INSTRUCTIONS TO CANDIDATES

Use black ink, black ball – point pen, black felt tip or your usual method.

Write your name, centre number and candidate number in the spaces on the front cover.

Answer ALL questions.

Write your answers in the spaces provided. If you run out of space, use the additional pages at the back of the booklet, taking care to number the question(s) correctly.

(Turn over)

INFORMATION FOR CANDIDATES

The number of marks is given in brackets at the end of each question or part – question.

The assessment of the quality of extended response (QER) will take place in question 7.

The quality of written communication will affect the awarding of marks.

(Turn over)

ANSWER ALL QUESTIONS.

- 1. Look at IMAGE 1.1 for Question 1 in the separate Diagram Booklet.**

Lysozyme is an enzyme found in saliva and tears. It hydrolyses the carbohydrates in bacterial cell walls.

Lysozyme, shown in IMAGE 1.1, is a single polypeptide containing 129 amino acids.

continued on the next page . . .

(Turn over)

Question 1 continued

1. (a) Lysozyme shows primary, secondary and tertiary structure.

(i) State what is meant by primary structure.

[1 mark]

continued on the next page . . .

(Turn over)

Question 1 (a) continued

- 1. (a) (ii) Look at TABLE 1.2 for Question 1 (a) (ii) in the separate Diagram Booklet.**

Use the information given and your own knowledge to COMPLETE TABLE 1.2 to explain how the secondary and tertiary structures of lysozyme are illustrated in IMAGE 1.1

[2 marks]

continued on the next page . . .

(Turn over)

Question 1 (a) continued

1. (a) (iii) The cytoplasm of bacterial cells is HYPERTONIC to saliva and tears. Suggest how the destruction of the cell wall of bacteria by lysozyme results in the death of the bacteria.

(Turn over)

[3 marks]

continued on the next page . . .

(Turn over)

Question 1 (a) continued

1. (a) (iv) Lysozyme works by an induced fit mechanism. Explain what this means.

[1 mark]

continued on the next page . . .

(Turn over)

Question 1 continued

- 1. (b) Look at GRAPH 1.3 for Question 1 (b) in the separate Diagram Booklet.**

The effect of pH on the activity of lysozyme is shown in GRAPH 1.3

- (i) Describe and explain the effect of pH on the activity of lysozyme.**

(Turn over)

Question 1 (b) continued

1. (b) (ii) Lysozyme has a wider range of pH activity than many other enzymes.

I. Use GRAPH 1.3 to find the range of pH over which lysozyme is more than 50% active.

Range = _____ to _____

[1 mark]

continued on the next page . . .

(Turn over)

Question 1 (b) (ii) continued

1. (b) (ii) II. Use the information in the question to suggest ONE advantage of lysozyme having a wider range of pH activity than many other enzymes.

[1 mark]

(Total for Question 1 = 12 marks)

(Turn over)

2. Look at IMAGE 2.1 for Question 2 in the separate Diagram Booklet.

IMAGE 2.1 shows metaphase during cell division of three cells of the mosquito, CULEX PIPIENS.

The mosquito has a diploid number of $2n = 6$

continued on the next page . . .

(Turn over)

Question 2 continued

- 2. (a) (i) Insert the correct letter (A, B or C) into the table below to indicate which stage of cell division is represented by each cell.**

Metaphase of:	Letter
Mitosis	
Meiosis I	
Meiosis II	

[2 marks]

continued on the next page . . .

(Turn over)

Question 2 (a) continued

2. (a) (ii) Look at the table for Question 2 (a) (ii) in the separate Diagram Booklet.

In the table, state TWO differences in the daughter cells of CULEX PIPIENS following mitosis and meiosis.

[2 marks]

continued on the next page . . .

(Turn over)

Question 2 continued

- 2. (b) Look at GRAPH 2.2 for Question 2 (b) in the separate Diagram Booklet.**

GRAPH 2.2 shows some changes seen in a cell undergoing mitosis.

continued on the next page . . .

(Turn over)

Question 2 (b) (i) continued

2. (b) (i) Calculate the rate of increase in distance between the centromeres of the sister chromatids between 15 and 30 minutes.

Space for working:

Rate = _____ $\mu\text{m minute}^{-1}$

[2 marks]

(Turn over)

Question 2 (b) continued

2. (b) (ii) Suggest how GRAPH 2.2 provides evidence to show what happens to the chromosomes during anaphase of mitosis.

[2 marks]

(Turn over)

Question 2 continued

- 2. (c) Look at IMAGE 2.3 for Question 2 (c) in the separate Diagram Booklet.**

The micrograph in IMAGE 2.3 shows onion plant cells undergoing mitosis.

continued on the next page . . .

(Turn over)

Question 2 (c) continued

**2. (c) (i) USE THE SCALE BAR to
calculate the magnification
of IMAGE 2.3**

Space for working:

Magnification = \times _____

[2 marks]

continued on the next page . . .

(Turn over)

Question 2 (c) continued

2. (c) (ii) On IMAGE 2.3 label:

A ONE cell in anaphase

B ONE cell in metaphase

[1 mark]

continued on the next page . . .

(Turn over)

Question 2 (c) continued

2. (c) (iii) Suggest from which part of the onion plant the cells in IMAGE 2.3 were taken.

Explain your answer.

(Turn over)

25

[2 marks]

(Total for Question 2 = 13 marks)

(Turn over)

- 3. (a) Red blood cells need to take in glucose and oxygen from the blood plasma. Glucose is a polar molecule and oxygen is non – polar.**

The uptake of glucose and oxygen by red blood cells was measured separately at increasing external concentrations of these two molecules.

continued on the next page . . .

(Turn over)

Question 3 (a) continued

**Look at GRAPH 3.1 for
Question 3 (a) in the separate
Diagram Booklet.**

**GRAPH 3.1 shows the rate of
uptake of glucose and oxygen.**

- 3. (a) (i) Look at TABLE 3.2 for
Question 3 (a) (i) in the
separate Diagram Booklet.**

continued on the next page . . .

(Turn over)

Question 3 (a) (i) continued

COMPLETE TABLE 3.2

to identify:

- **which line on GRAPH 3.1 represents glucose and which represents oxygen;**
- **the type of transport used by each substance.**

[2 marks]

continued on the next page . . .

(Turn over)

Question 3 (a) continued

**3. (a) (ii) Explain the difference
in the shape of lines
A and B shown on
GRAPH 3.1**

(Turn over)

Question 3 continued

- 3. (b) Red blood cells are packed full of haemoglobin. When mature, they do not contain any of the organelles usually found in eukaryotic cells.**

Using this information and your knowledge of CELL STRUCTURE conclude why mature red blood cells:

continued on the next page . . .

(Turn over)

[2 marks]

3. (b) (ii) can only transport substances across the cell membrane against a concentration gradient at very low rates.

(Turn over)

[2 marks]

(Total for Question 3 = 10 marks)

(Turn over)

4. Look at IMAGE 4.1 for Question 4 in the separate Diagram Booklet.

Starch is made up of two molecules, amylose and amylopectin, shown in IMAGE 4.1

Look at IMAGE 4.2 for Question 4 in the separate Diagram Booklet.

IMAGE 4.2 shows sections of amylose and amylopectin.

continued on the next page . . .

(Turn over)

Question 4 continued

4. (a) (i) State the general name given to BONDS X and Y.

[1 mark]

4. (a) (ii) State ONE similarity and ONE difference between amylose and amylopectin, shown in IMAGE 4.1 and IMAGE 4.2

Similarity _____

(Turn over)

Difference _____

[2 marks]

continued on the next page . . .

(Turn over)

Question 4 continued

- 4. (b) Look at IMAGE 4.3 for Question 4 (b) in the separate Diagram Booklet.**

In order to be absorbed into the blood, starch has to be hydrolysed to produce glucose. The digestion of amylose happens in two stages as shown in IMAGE 4.3

continued on the next page . . .

(Turn over)

Question 4 (b) continued

4. (b) (i) State what is meant by the term hydrolysis.

[1 mark]

continued on the next page . . .

(Turn over)

Question 4 (b) continued

4. (b) (ii) Amylopectin is digested in a similar way but needs an additional enzyme, isomaltase, for complete hydrolysis.

Explain the roles of the THREE enzymes involved in the complete hydrolysis of starch.

(Turn over)

Question 4 (b) continued

4. (b) (iii) One variety of corn used in animal feed has a lower amylose: amylopectin ratio than other varieties.

With reference to IMAGE 4.2 and IMAGE 4.3, suggest why this lower ratio results in an increase in the rate of starch hydrolysis.

(Turn over)

[2 marks]

continued on the next page . . .

(Turn over)

Question 4 (b) continued

4. (b) (iv) Describe a chemical test that could be used to show that starch is no longer present at the end of hydrolysis.

(Turn over)

45

[2 marks]

(Total for Question 4 = 11 marks)

(Turn over)

5. (a) Look at IMAGE 5.1 for Question 5 (a) in the separate Diagram Booklet.

IMAGE 5.1 represents part of a DNA molecule.

(i) Circle ONE nucleotide in IMAGE 5.1

[1 mark]

(ii) Using the letters A, C, T, G, label ALL the organic bases in IMAGE 5.1

One adenine is labelled already.

[2 marks]

continued on the next page . . .

(Turn over)

Question 5 (a) continued

- 5. (a) (iii) Look at TABLE 5.2 for Question 5 (a) (iii) in the separate Diagram Booklet.**

In the late 1940s, Erwin Chargaff published his research into the base composition of the DNA in different species.

Some of his findings are shown in TABLE 5.2

continued on the next page . . .

(Turn over)

Question 5 (a) (iii) continued

**5. (a) (iii) I. Complete TABLE 5.2
to suggest values for the
sea urchin.**

[1 mark]

**II. Based on the results
in TABLE 5.2, state the
conclusion that can be
made regarding the base
composition of DNA.
Explain your answer.**

(Turn over)

Question 5 continued

5. (b) Meselson and Stahl also carried out investigations on DNA in the 1950s.

They proposed the theory of semi-conservative replication.

State what is meant by semi-conservative replication.

(Turn over)

[2 marks]

continued on the next page . . .

(Turn over)

Question 5 continued

5. (c) DNA contains only four different bases, but proteins can be made of up to 20 different amino acids. Explain how these four bases allow for the production of so many different proteins.

(Turn over)

[4 marks]

(Total for Question 5 = 13 marks)

(Turn over)

6. Look at IMAGE 6.1 for Question 6 in the separate Diagram Booklet.

TRADESCANTIA, shown in IMAGE 6.1, is a house plant which is popular due to its ability to survive long periods without watering because its stems can store water.

Look at IMAGE 6.2 for Question 6 in the separate Diagram Booklet.

The solute potential of the cells of the stem was measured by using epidermal peels.

continued on the next page . . .

(Turn over)

Question 6 continued

Each peel was mounted on a different microscope slide in a different concentration of sucrose solution, as shown in IMAGE 6.2

Look at TABLE 6.3 for Question 6 in the separate Diagram Booklet.

After 10 minutes the peels were observed under a microscope.

The number of plasmolysed and unplasmolysed cells in each sample was recorded. The results are shown in TABLE 6.3

continued on the next page . . .

(Turn over)

Question 6 continued

**6. (a) (i) COMPLETE TABLE 6.3 for
1.0 mol dm⁻³ sucrose.**

[2 marks]

**(ii) Look at the diagram for
Question 6 (a) (ii) in the
separate Diagram Booklet.
The diagram is a blank grid.**

**On the grid, use the data in
TABLE 6.3 to draw a graph
which shows the percentage
of plasmolysed cells against
sucrose concentration.**

[4 marks]

continued on the next page . . .

(Turn over)

Question 6 (a) continued

6. (a) (iii) I. Look at the formula for Question 6 (a) (iii) in the separate Diagram Booklet.

Use your graph and the formula shown to estimate the solute potential of the solution when 50% of the TRADESCANTIA cells are plasmolysed.

continued on the next page . . .

(Turn over)

Question 6 (a) (iii) I. continued

Space for working:

Solute potential

= _____ kPa

[2 marks]

continued on the next page . . .

(Turn over)

Question 6 (a) (iii) continued

6. (a) (iii) II. State the pressure potential of the cells in the tissue and identify the term that describes their condition at this solute concentration.

Pressure potential (ψ_p)

= _____ kPa

Term = _____

[2 marks]

continued on the next page . . .

(Turn over)

Question 6 continued

6. (b) Suggest how the experiment could be altered to improve:

- confidence in the results**
- the accuracy of the estimated solute potential in TRADESCANTIA cells.**

(Turn over)

[2 marks]

(Total for Question 6 = 12 marks)

(Turn over)

7. DNA, mRNA, rRNA and tRNA are nucleic acids involved in protein synthesis.

For tRNA to carry out its role in protein synthesis it needs to undergo the process described below:

- an amino acid, a molecule of ATP and a molecule of tRNA bind to a tRNA – activating enzyme**
- ATP is broken down releasing two phosphates and producing AMP (Adenosine mono phosphate)**

continued on the next page . . .

(Turn over)

Question 7 continued

- **the AMP binds to the amino acid to produce an activated amino acid**
- **a molecule of tRNA is then bonded to the activated amino acid**
- **to produce activated tRNA**
– the AMP is released in the process

continued on the next page . . .

(Turn over)

Question 7 continued

Describe the function of each of the four types of nucleic acid involved in protein synthesis and state where in the cell each carries out its function. (A detailed account of protein synthesis is not required.)

Use the information above to explain the role of ATP in producing activated tRNA molecules and your knowledge of enzymes to suggest why at least 20 enzymes are needed to produce all the tRNA molecules required for protein synthesis.

(Turn over)

[9 marks QER]

(Total for Question 7 = 9 marks)
